Olamide Sunday Fawole

Full-Stack Developer
Lagos, Nigeria | osfawole27@gmail.com | olamide8162.github.io | GitHub

PROFILE

Self-taught full-stack developer who builds and runs real products end to end: mobile and web frontends, databases, backend APIs and the Linux servers behind them. I came to software from HR and school administration, so I build with the people who run an organisation in mind. Comfortable using AI coding tools to move fast while owning the product decisions, architecture, testing and production fixes.

TECHNICAL SKILLS

- **Frontend:** React, React Native, Expo, TypeScript, JavaScript, Tailwind CSS, Vite
- **Backend:** Python, FastAPI, Node.js, REST APIs, Server-Sent Events, push notifications
- **Data:** PostgreSQL (Supabase), Row Level Security, triggers, SQLite, realtime subscriptions
- **Infrastructure:** Ubuntu servers, systemd services, cron, Cloudflare Tunnel, Vercel, Git
- **AI:** LLM integration, prompt design, Claude Code and other AI coding tools
- **Security:** Cybersecurity fundamentals (Google Cybersecurity Certificate in progress), secrets handling, access control with Row Level Security
- **Design and media:** UI/UX basics (user flows, wireframes, usability), video editing (CapCut, Canva)

PROJECTS

GymApp – multi-gym class booking app | 2026
React Native, Expo Router, TypeScript, Supabase, Google Maps

- Built an iOS/Android app with three role-based experiences: gym members, gym owners and a platform super admin.
- Wrote Postgres triggers that keep live seat counts in sync and automatically promote the next waitlisted member when someone cancels.
- Converted a single-gym app into a multi-gym platform with per-gym data isolation enforced by Row Level Security.
- Added QR-code check-in, a map of nearby gyms sorted by distance, realtime gym chat, and a bulk gym importer using Google Places with a SerpAPI fallback.
- In progress: gym subscriptions, so members can pay for their gym membership in the app.

Exopleen – real-time crypto signal tracker | May 2026 – Present
React 19 PWA, Tailwind, Python, FastAPI, SQLite, Ubuntu, Vercel

- Run a live system that monitors ~700 Solana wallets, tracks each new token's price every 3 seconds for 10 days, and sends push alerts at 2x, 5x and 10x.
- Built an AI scoring agent with a feedback loop: it reviews its own worst misses every 20 outcomes and adds the lessons to future prompts.
- Operate six systemd services on a cloud Linux server; fixed production incidents including a 5-hour tunnel outage, SQLite lock-ups and a silent zero-wallet bug.

Bracket/HQ – tournament platform for FC Mobile | 2026
Web app, Google sign-in, Server-Sent Events, built with Emergent

- Players host and join tournaments in four formats: single and double elimination, round robin, and group stage plus knockout.
- Brackets for 4 to 32 players update live on every open screen as results are reported.

PROFESSIONAL TRAINING

- IBM Full Stack Software Developer Professional Certificate
- Google UX Design Professional Certificate
- Google Cybersecurity Professional Certificate | In Progress

PROFESSIONAL EXPERIENCE

Human Resources Officer | Jul 2021 – Jun 2022
Lagos State Fire and Rescue Service – Alausa, Ikeja, Lagos

- Managed recruitment, onboarding and exits, and processed staff payroll and wage reports.
- Kept personnel records, performance tracking and leave records accurate and up to date.

Office Assistant | 2014 – 2015
Wonderland Academy – Ketu, Lagos

- Supported scheduling, payroll and substitute-teacher cover; kept student records and data entry accurate.

Teacher | 2013 – 2014
Beautiful Gate Nursery & Primary School – Ogijo, Ogun State

- Planned and delivered lessons and gave students regular feedback on progress.

EDUCATION

Bachelor of Science, Agronomy | 2015 – 2020
University of Ibadan, Ibadan
